

Advanced Investigation Systems LLP

DIAMOND CORE DRILLING

Advanced Investigation Systems use the Hilti DD200 diamond coring system, the latest in diamond coring technology, combined with conventional or vacuum attachment mechanisms.

25mm to 400mm Diameter Cores

- mass concrete, reinforced concrete, brickwork, blockwork and bituminous macadam coring
- coring of slabs and hardstanding prior to ground investigation
- coring of road surfaces to determine construction thickness
- compressive strength testing of recovered cores

Horizontal Coring

- investigation of retaining wall construction (thicknesses in excess of 2m cored)
- stitch drilling for large / variable shaped holes
- cored holes for ducting / air conditioning / plumbing

Inclined Coring

- investigation of foundations
- drainage & ducting
- precise and accurate, together with an infinitely variable set-up angle
